DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/29/2006 has been entered.
2. Claims 1 and 11-15 are cancelled. Claims 2-10 are now pending in this application.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 6-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.
5. Regarding claims 6 and 8-10, the language of the claims includes the phrase "said picture corresponding to said rupture point as if said picture corresponding to said

Art Unit: 2628

rupture point is rolled along the other arc" (lines 10-12), which describes the tubular flipping effect as illustrated on pages 27-34 of the specification. However, the equation for $f_1(r)$ used by claims 6 and 8-10 (equation 1-5) is not described for generating a tubular flipping effect. The specification uses a different equation for $f_1(r)$ to generate the tubular flipping effect. Using equation 1-5 as described by claims 6 and 8-10 to generate the tubular flipping effect raises the issue of new matter, as this equation is not described in the specification for this particular effect.

6. Regarding claim 7, the language of the claim includes the phrase "said picture corresponding to said rupture point along a plane parallel to said first virtual plane" (lines 11-12), which describes the flipping effect as illustrated on pages 17-27 of the specification. However, the equation for $f_1(r)$ used by claim 7 (equation 2-5) is not described for generating a flipping effect. The specification uses a different equation for $f_1(r)$ to generate the flipping effect. Using equation 2-5 as described by claim 7 to generate the flipping effect raises the issue of new matter, as this equation is not described in the specification for this particular effect.

Allowable Subject Matter

7. Claims 2-5 are allowed.

8. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to show the equations as taught by claims 2-5.
